

Back-End Engineer

Contract type: permanent
Opening: ASAP
Location: Paris / Neuilly-sur-Seine
Experience: 0-3 years of experience
Salary: based on profile & experience
Contact: job@kolibree.com

About Kolibree:

Kolibree is the world leader in connected Oral-Care.

Since 2014, Kolibree reinvents teeth brushing. Its flagship product, the world's first connected electric toothbrush, transforms what was once a tedious activity into a fun and creative experience using unique proprietary technologies (motion sensors and AI algorithm to detect, in real-time, the areas of your mouth where you brush).

The Kolibree mobile apps provide real time feedbacks and games to keep kids and adults motivated when brushing their teeth. For children, the toothbrush acts as a joystick for games whilst helping improve brushing technique.

Job Description

Key responsibilities:

You will develop & maintain key components of our back-end, including our Web Services, our rewards entities and advanced analytics. You will help the team scale the platform from 10,000 users to 1M+ users within the next 2 years

Experience required for the position:

- Knowledge of Scrum / Agile methodology
- Prior DevOps experience in public-cloud environment (AWS or equivalent)

Technical Expertise required for the position

- Python / Django (or equivalent)
- PostgreSQL
- Web development skills (HTML, CSS, Javascript)

Other technical skills (optional)

- Mobile App dev (iOS and/or Android)

Non-technical skills

- You are solution oriented and open-minded
- You like consumer, simple, well designed products and UX
- You are flexible, motivated and willing to keep learning

Languages

English (must), French (nice to have)
